Subject: ACTION: DW intakes - GKM

Hi Harry and team – Yesterday we were asked about drinking water intakes by the NYT, and we relayed the information that no intakes were shut down as a result of the release - just that one intake on the San Juan River was shut down previously, for unrelated reasons.

The daily update includes the info below. Is a well development area the same as an intake? I need this clarified ASAP because I need to reach out to the reporter if what we sent them was incorrect. Also looping in the water folks.

Thanks-

Kelly

- Region 9 has hired a contractor to coordinate with Navajo Tribal Utilities Authority (NTUA) to deliver water to the areas impacted by the discharge. **The Montezuma Creek well development area was closed as a precaution prior to any impact. EPA contractors are collecting NTUA provided water from the Sweetwater wellfield and delivering it to the Montezuma Creek service area.**

Kelly Zito
